

# REDUCING SPEED, GENTLY AND EFFECTIVELY SPEED CALMER

The unique Rosehill rubber speed calmer has been developed to give HGV's and other vehicles a smoother and more effective speed calming transit. It is a longer and less aggressive alternative to traditional speed 'bumps', and reduces the impact on vehicles and their contents. Proven to help reduce speeds to 5mph, they provide a shallow entry

angle with a steeper, more controlled descent on exit.

Made up of large durable sections, the speed calmer is designed to fit across the full width of an off-highway roadway, either kerb to kerb, or with tapered end ramps. Special 'moulded in' speed limit signs and corporate graphics are available as optional extras.

“The rubber speed calmer is **very effective at calming HGV transit speeds down to 5mph**, with minimal disruption to vehicles and their contents. We chose the units because they are surface fixed and can be relocated should the need arise.”
